HANDS-ON DISSECTION COURSE MINIMALLY INVASIVE NEUROSURGERY

The ENDOMIN College team is pleased to announce the resumption of the hands-on activities with this new generation dissection course on advanced minimally invasive Neurosurgery. The course is dedicated to Neurosurgeons with interest in minimally invasive Neurosurgery. Basic experience in minimally invasive techniques is of help but not required. Didactically presented solutions will be simulated during extensive hands-on dissections and observed during transmitted live-surgeries from distinct international experts. This and many practical hints will improve your skills, shorten your learning curve and avoid unnecessary complications in performing minimally invasive Neurosurgery.

Having past this course you will be able to discuss latest technical and clinical advances in minimally invasive neurosurgery and use these techniques for a variety of indications in cranial and transnasal neurosurgery. We are sure, that this will be a very exciting training course for you.

COURSE OBJECTIVES & HIGHLIGHTS

This event is offered in two complementary parts, which can be booked separately as well as in combination.

Part I is a low-cost theoretical event, hosted in Hungary's legendary capital Budapest. International experts will present lectures on endoscopic and minimally invasive techniques in brain-, skull base and vascular neurosurgery as well as endoscopic ventricular and transnasal surgery.

Part II is hosted in the charming city Debrecen within the Hungarian "Pusztá". Here, a restricted number of participants will experience extensive hands-on dissections on fresh human specimens and watch life-surgeries with detailed case discussions. Working on fresh human specimens is a world-wide unique opportunity and an unforgettable experience, particularly offered for experienced users.
